

How do I set up Starlink?

Starlink is easy to set up!

1. **Find a clear view of the sky.**
 - Use the "Check for Obstructions" tool on the Starlink app ([iOS](#), [Android](#)) to find the install location that will deliver the best service.
2. **Plug Starlink into power.**
3. **Within a few minutes, your Starlink will connect to satellites.**
 - First, Starlink will automatically level itself to search for satellites overhead. Do NOT attempt to manually adjust your Starlink.
 - Next, Starlink will make an initial connection to the Starlink constellation and tilt to the optimum angle for satellite coverage - slightly north or south based on your location in the northern or southern hemisphere.
4. **Connect to high-speed Starlink internet from your devices!**
